PREFACE

The “Report on Countrywide Survey for Spurious Drugs” is published by CDSCO on behalf of Directorate General of Health Services, Ministry of Health & Family Welfare, Govt. of India. The survey report is produced to fulfill the requirements prescribed in the Drugs & Cosmetics Rules-1945 for standards of drugs produced and /or marketed in India and contributes in control of quality of the medicinal products.

The quality of Drug formulations has been a prime concern at National as well as International level. Circulation of spurious drug can lead to grave & adverse consequences on both consumers (patients) and genuine manufacturers. According to the report received from various State Drug Controllers, the extent of circulation of spurious drug in Indian retail market is about 0.3%. However, media often magnifies it, in a sensational manner, between 10-25% which is mostly unverified. Indian Pharma Industry expressed displeasure over the repeated projection of Indian Pharma Industry as major producers of spurious drugs in the world. Due to dire consequences on public health in view of various projections regarding circulation of spurious drug, a systematic study was necessary to assess the actual extent of spurious drug circulation in the community at large.

Report on Countrywide Survey for Spurious Drugs would, no doubt, provide relevant information about the flow of Spurious drugs in National market and bring awareness among the community. Perhaps this is the first time in world history such a scientific study has been carried out by collecting huge number of samples involving consumer associations and other NGOs. It is expected that people at large will be immensely benefited through this report and their belief in availability of quality medicines in India will be assured & strengthened.

The sample collection and its verification was a mammoth task and involved strenuous day and night work on part of NGO's, CDSCO Officials & Laboratories over a period of 7 Months. The team work to bring out the actual figures on extent of problem of spurious drugs in the country is appreciable.

The survey report covers summary of sampling, results, interpretation and gives information about present scenario of circulation of spurious drugs all over India. Detailed information on determination of sample size for estimation of counterfeit drugs, format for recording the details of sample drawn and amendments done in Drugs & Cosmetics Act-1940 are annexed.

1.0 Executive Summary

1.1 **Background:** Circulation of spurious drug can lead to grave, adverse consequences on both consumers (patients) and genuine manufacturers. According to State Drug Controller, the extent of circulation of spurious drug is about 0.3%. However, media often magnifies it, in a sensational manner, between 10%-25% which is mostly unverified. Due to dire consequences on public health in view of circulation of spurious drug, a systematic study was necessary to assess actual extent of spurious drug circulation in the community at large.

1.2 **Methods :** Samples of popular brands of oral solid dosage (OSD) formulations, belonging to 9 therapeutic categories (anti-infective, anti-malarial, anti-T.B.Drugs, steroids, antihistaminic, cardiovascular drugs, anti-diabetics, NSAIDs, and multivitamin preparations), were collected between November & December 2008. Samples of 61 popular brands of the above mentioned class were collected. Collection of samples of each brand were made from retail pharmacy outlet (25 each from metros, big cities, district head quarters, towns and villages) in each zone of CDSCO (East, West, North and South) with the help of NGOs and consumer associations, who in turn, collected drug without prescription from retail shop by acting as surrogate patients. Details of the sample (name of drug, brand name, expiry date, batch number, address of retail pharmacy outlet, etc.) were recorded as per preset format and samples were stored as per required storage conditions. Samples collected were handed over to authorized quality assurance person of the respective manufacturer for identification by physical examination so as to establish the authenticity and were asked to return the samples with comments for undertaking further chemical analysis.

From the samples which were accepted by the manufacturers as genuine product (24,125), five drug samples of each brand were randomly selected and were subjected to further chemical analysis in Government testing laboratory (Indian Pharmacopoeia Commission) and Private Testing laboratory (M/s Arbro Laboratory, New Delhi).

Later, on the direction of Ministry of Health & FW, an additional 2,671 samples were also sent for chemical analysis (11.072 % of the collected samples which were accepted by the manufacturer as genuine i.e. 24,125).

1.3 **Findings :** Most of the pharmacy retail shops in metro cities refused to sale the scheduled drug without prescription and in towns and district head quarters there was tendency to replace one brand with other brand. Though most of the drugs were not available in retail pharmacy outlets, located in villages, availability of all selected brands was uniform throughout the country. Most of the retail shop did not provide cash memo without request and at times even with request. A total of 24,780 samples were collected by visiting around 40,000 pharmacy outlets, of which 644 samples were of SALA (Sound Alike and Look Alike). Of remaining 24,136 samples, only 11 samples were not accepted by manufacturers as their genuine product by physical examination. These unaccepted samples were mainly from Bihar, West Bengal, UP and Gujarat states accounting five, three, two and one sample respectively. However, none of these samples failed in identification test. Of 305 samples subjected to chemical analysis, only 3 were found to be substandard with respect to the content of the active ingredient mentioned on the label (reported results are 86.0, 89.3 and 84.8%). Additional 2,671 samples, which were subjected to testing on the direction of Ministry of Health & FW, showed 100% conformity with respect to identification and assay as reported by the government analyst at various central government testing laboratories.

1.4 **Interpretation:** The extent of spurious drug in retail pharmacy is much below the projections made by various media, WHO, SEARO, and other studies i.e. only 0.046 % (11 samples out of 24,136 samples).

1.5 **Funding:** Ministry of Health & FW, Govt. of India

2.0 Background

The term 'Spurious Drug' has been defined under Section 17-B of the Drugs and Cosmetics Act, 1940, as amended by the Drugs and Cosmetics (Amendment) Act, 1982. In brief, a drug shall be deemed to be spurious if it is manufactured under a name which belongs to another drug, if it is an imitation of another drug or if it has been substituted wholly or partly by another drug or if it wrongly claims to be the product of another manufacturer. A stringent penalty for manufacture and sale of spurious drugs has also been prescribed under the Act. Counterfeiting of commercial products, including medicines, is a global issue and is reported in many countries. The Govt. is aware of the problem of movement of spurious drugs in the market and has taken serious note of it.

Under the provisions of Drugs and Cosmetics Act and Rules there under, it is the joint responsibility of Central and State Governments through their respective Drug Control organizations to regulate manufacture and sale of drugs as well as to keep surveillance over possible movement of spurious drugs .

Manufacture and sale of spurious drugs is primarily a clandestine activity. To this extent, it is difficult to detect the manufacture or movement of spurious drugs. Any effective action against this activity would require continuous surveillance by the regulators and active co-operation from the Law and Order Enforcement machinery in the States. However, unverified and unsupported figures are being reported in the media as to large-scale production and trading of spurious drugs in India.

Being a clandestine activity, it is difficult to assess the actual quantum of spurious drugs. A study of samples of drugs tested all over the country during the last 10 years reveals that about 0.2% to 0.4% of around 40,000 samples fall within the category of spurious drugs. However, this may not project exact situation and would depend upon the intensity of surveillance over the clandestine activity. It is pertinent to mention that the aforesaid data is related to only the spurious drugs which are defined under section 17B(d), not to other sub sections of 17 B. As per Mashelker Committee's report the following results, shown in Table-1, are obtained during the period 1995-2003.

Table: 1

Year	Tested	Not of sub-standard quality	Spurious	Not of Sub-standard Quality %	Spurious %
1995-1996	32770	3490	100	10.64	0.30
1996-1997	38936	3189	94	8.19	0.24
1997-1998	32936	2979	157	9.04	0.47
1998-1999	38936	3189	94	8.19	0.24
1999-2000	35570	3666	115	10.31	0.32
2000-2001	36947	3088	112	8.36	0.30
2001-2002	38824	3458	96	8.96	0.25
2002-2003	36314	3395	125	9.34	0.34

As per the feed back available from the State Drugs Controllers following is the statement, showing in Table-2, indicating the number of samples tested & found sub. standard/ spurious during the period 2003-2008

Table-2

Year	Tested	Not of sub-standard quality	Spurious	Not of Sub-standard Quality %	Spurious %
2003-2004	38313	2402	67	6.3	0.3
2004-2005	49287	3695	144	7.5	0.29
2005-2006	41494	3017	145	7.3	0.35
2006-2007	42354	2718	66	6.4	0.16
2007-2008 (upto Jan. 08)	38313	2402	67	6.3	0.17

The media had been projecting the problem of spurious drugs in the country in a manner which do not provide a balanced picture and has, therefore, caused serious apprehension. The figures quoted by media range from 10% to 25% of drugs in the country being spurious drugs. These are totally unsubstantiated reports. For example, on the basis of an alleged WHO report, the media frequently reports that 35% of fake drugs produced in the world come from India. However, when enquired, WHO has neither confirmed its authenticity nor did hint the source of such figures. WHO Representative in India has clarified that there is no actual study by WHO concluding that 35% of the World spurious drugs are produced in India. He has also regretted that occasionally some individuals in the media and the organizations use WHO references incorrectly and even irresponsibly.

The issue of spurious drugs gets debated with a lot more emotive content than factual understanding of situation. It is always possible that the quoted facts, stories and statistics feed on each other and result in distorted and exaggerated projections. Trading in counterfeit product, including drugs, is reported world over. However, keeping in view the serious implications of spurious drugs on public health as well as the loss to genuine industry, the Govt. has taken various measures to combat this menace.

On account of apprehensions about the availability of safe and genuine medicines in India, it is in a way causing concern to the consumers within the country, on the other affecting the credibility of drug products from India. Hence, the Government had set up an Expert Committee under the Chairmanship of Dr. R.A. Mashelkar, DG (CSIR) in February, 2003 to recommend measures for strengthening the drug regulatory system in the country as well as tackling the problem of spurious drugs.

The Committee had submitted its report in November, 2003. In part (B) of the Report, the Committee had recommended several changes in the penal provisions of the Drugs & Cosmetics Act. The main recommendations of the Committee are as follows:-

- i) Enhancement of penalty, for sale and manufacturing of spurious drugs that cause grievous hurt or death, from life imprisonment to death.
- ii) Sale and manufacture of spurious drugs, which are not

likely to cause consequences as stated in (i) above, be made cognizable and non-bailable.

- iii) There should be a penalty for those who are unable to produce documents in support of their purchase.
- iv) There should be a provision for compounding of minor offences so that these should be disposed of expeditiously while prosecution is able to concentrate on serious cases in the appropriate courts.
- v) Authorization of the police to file prosecution.
- vi) Constitution of special courts for trial of offence under the Drugs & Cosmetics Act so that judicial proceedings can be expedited.
- vii) Enhancement of prison terms and fines for different offences, including the concept of damages.

In the tune of recommendations given by the Mashelkar Committee a bill was passed in both the houses of Parliament and the bill has been notified as The Drugs and Cosmetics (Amendment) Act No.26 of 2008 dated 5th December 08 (copy enclosed as Annexure-1).

A recent survey on the extent of spurious (counterfeit) medicines in India was carried out by SEAR Pharm Forum in Association with SEARO, WHO and according to their report, extent of counterfeit suspects were to the tune of 3.1 per cent. However, from the laboratory analysis, only 0.3 per cent did not meet the pharmacopoeia standards in terms of label claim.

To find out the exact extent / magnitude of the issue, the Office of Drugs Controller General (India) consulted Indian Statistical Institute, Hyderabad and requested ISI to furnish a sampling model based on rational statistical method. Later, the Institute submitted its report to the Drugs controller General (India) explaining the statistical methodology of determining the sample size of retail pharmacy outlet, to be surveyed, which is enclosed as Annexure-2.

The following aspects were considered while determining the sample size (the number of retail pharmacy outlets to be surveyed):

- (i) The possible range of the chance of getting a spurious drug is in between 0.3% to 30% as suspected by different sources such as Mashelkar Committee Report, media, press

reports, etc.

- (ii) There are about 400,000 retail pharmacy outlets in the country.
- (iii) Sample size is determined for one brand of one generic drug of one therapeutic category.

Based on the report submitted by Indian Statistical Institute, Hyderabad, it was decided that:

- The following therapeutic categories of drugs will be considered for the survey:
 - a. Anti-infective
 - b. Steroids
 - c. Antihistaminic
 - d. Cardiovascular Drugs
 - e. Anti-diabetics
 - f. Anti-malarial
 - g. NSAIDs
 - h. Anti-T.B.Drugs
 - i. Multivitamin preparations
- Sixty one (61) popular brands of drugs belonging to the aforesaid therapeutic category would be collected.
- The drug samples from each brand under this survey would be drawn from 500 retail pharmacy outlets, 100 from each stratum (metros, big cities, District HQs, Towns and Villages).
- The drug samples under this survey would be collected within a period of not more than 60 days.
- The drugs would be collected without prescription.
- The drugs would be collected by the members of Consumers Association / NGOs as surrogate patient

On the basis of aforesaid decision and subsequent approval received from the Ministry of Health, Govt. of India, the present study was started with the objective to collect Sixty One (61) popular brands of drugs belonging to nine therapeutic categories and manufactured by thirty (30) Manufacturing Company from different one hundred (100) retail sales outlets, located in each stratum (metros, big cities, district HQs, towns, and villages) throughout the country, covering all four zones. A quantity of smallest pack available would be purchased from each pharmacy outlet at a time.

All CDSCO zonal officers were directed by the Drugs Controller General (India) to coordinate with the Consumer Action Forums and other local NGOs for collection of samples from retail pharmacy outlets through their members as surrogate patient within a span of not more than 60 days. The cash memo for purchased drug sample would be asked for but if refused, without further insistence, record should

be maintained accordingly.

Each brand would be collected from twenty five (25) retail pharmacy outlets of each of the five strata (i.e. Metro City, Big Cities, District HQs, Towns and Villages) under each zone. The respective zonal officer (i.e. Deputy Drugs Controllers of East, West, South and North Zones of CDSCO) should make a strategy for collection of samples from different retail sales outlets, keeping in view the aforesaid strata ,after discussion with the local NGOs / Consumers' Association so that a uniform distribution of retail outlets could be selected at random for each brand.

All the zonal officers called the representatives of the said Consumers' Association/ NGOs in respective zonal offices and explained in detail the modalities of the survey and handed over the list of drugs to be collected along with the Format through which the collected drugs were to be sent to the zonal office.

As per the aforesaid model, a total number of Twenty Four Thousand One Hundred Thirty Six (24,136) Samples belonging to nine (9) therapeutic categories, containing sixty one (61) fast moving brands, were collected by the members of the Consumers' Association/ NGOs during October-November'08 from all corners of India covering Metro cities, Big Cities, District Head Quarters, Town and Village as detailed in Table-3

3.0 Detail of sampling

4.0 Further Processing after Collection:

All the samples were collected through the members of Consumer Associations/NGOs (few drug samples were collected by the Drug samplers of CDSCO from such places where local NGOs did not cooperate) as surrogate patient (list of Consumers Association / NGOs are enclosed in Annexure-3), After such collections were sent to the respective zonal offices of CDSCO, details of drug samples (i.e., name of drug, brand name, name of manufacturer, mfg. date, expiry date, batch no., address of the retail pharmacy outlet from where the drug sample is purchased, sample number etc.) were recorded. The formats used for this purpose are enclosed as Annex- 4 & 5.

All the samples from different zones were centrally processed at CDSCO North Zone office at Ghaziabad and were handed over to the authorized designated QA persons of respective manufacturer with a request to identify the product by physical examination and return back all the samples with comment for further chemical analysis. Accordingly, eleven (11) samples, as cited in table-5, had not been accepted by the original manufacturers as genuine on physical examination due to the reason stated in the respective column. However, rests of the samples (24,125) were accepted by the manufacturer as their genuine product and copy of Certificate of Analysis (COA) for these entire products were also furnished by the respective firm.

5.0 Details of Drug Samples which were not accepted by the respective manufacturer as genuine product:

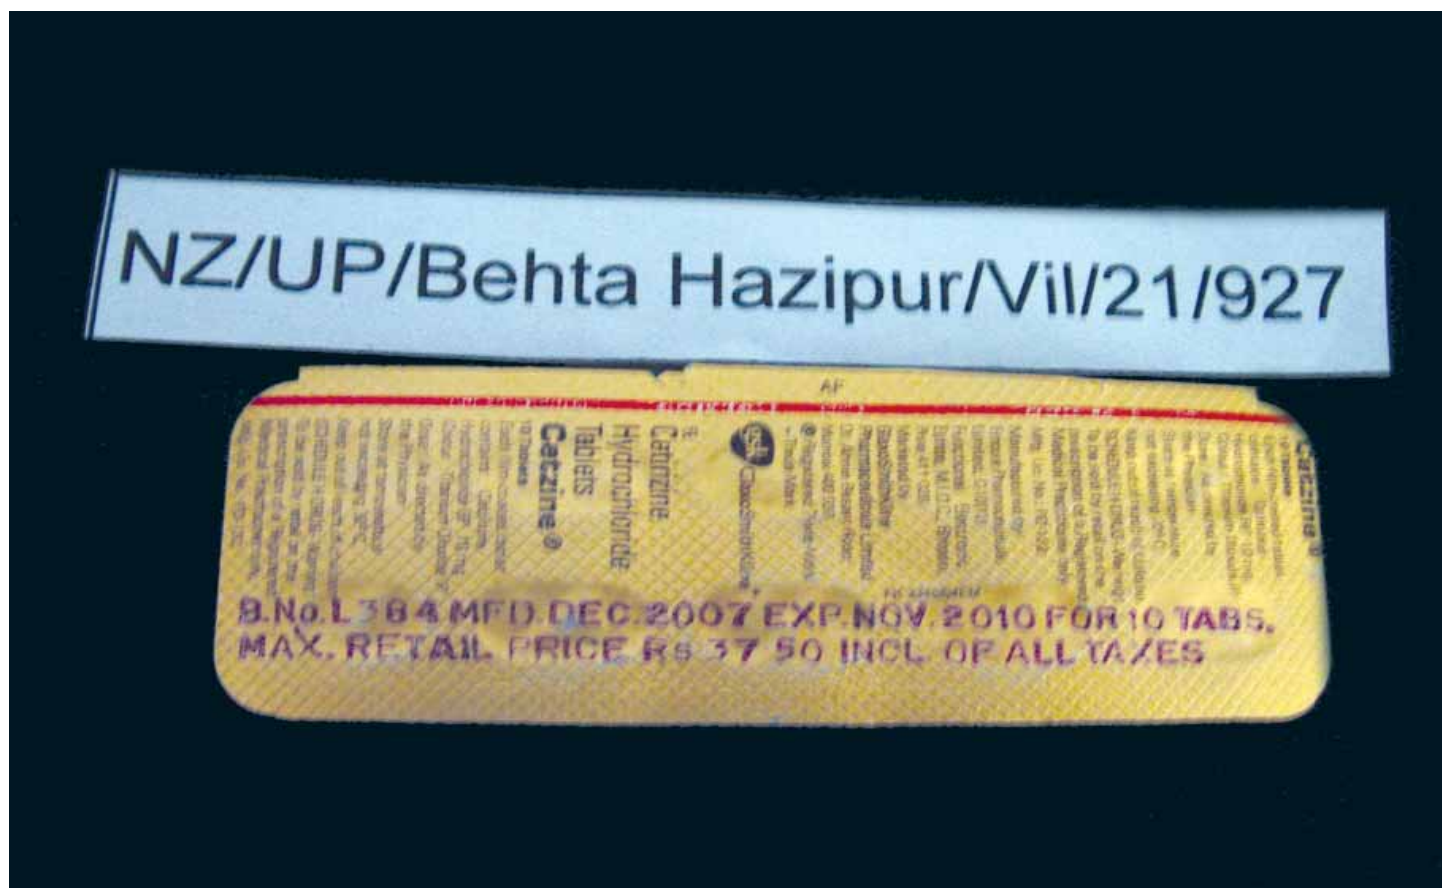

Table-5

S.No.	Name of the Brand	Generic Name	Batch No.	Sample No.	Manufactured by	Name & Address of the Shop	Remarks
1	Nise	Nimesulide Tablets 100mg	V80167, D/M-April,08, D/E-March, 2011	EZ/WB/Burdwan/ T/47/1024	M/s Dr. Reddy's Laboratories Limited, Khol, Baddi, Distt. Solan.	M/s Rupam Medicine Centre, Khosbagan, Burdwan, West Bengal.	Spurious. Foil not matching (not coated with protective overcoat). Text matter difference (no dot after 'physician' & 'children'). Not matching with dot elimination system of Dr.Reddy's. As per CDL, Kolkata Test Report No. 32-3/2009-SS/SZS-6/1064 dated 04.06.2009 – identification positive, assay – 69.4%
2	Nise	Nimesulide Tablets 100mg	V80167, D/M-April,08, D/E-March, 2011	EZ/BR/Hajipur/47/620	M/s Dr. Reddy's Laboratories Limited, Khol, Baddi, Distt. Solan.	M/s Anupama Medical Hall, Subash Chowk, Hajipur, Bihar.	Spurious. a) Foil is of poor quality. b) Kangaroo symbol is not matching. c) Font size of 'NISE' on PVC side is not matching. & d) Font size of text matter on foil not matching. As per CDL, Kolkata Test Report No. 32-3/2009-SS/SZS-5/1062 dated 04.06.2009 – identification positive, assay – 96.2%

8.0 Further sampling from the Residual stock:

On the basis of directive received from the Ministry of Health & FW, further 2,671 Samples from the residual stock of drugs were collected at random and sent for chemical analysis to different Central Govt. Testing Laboratories shown in Table 7. All the samples were declared as standard quality with respect to identification and assay details of which has been shown in table no. 8 as Annexure VI.

Table 7

9.0 Recent Study on Spurious Drugs

9.1 SEARPharm Forum in Association with WHO (SEARO) carried out a survey on the extent of spurious (counterfeit) medicines in India in 2007 and collected 10,743 drug samples containing 56 popular brands belonging to 12 therapeutic categories. According to their report, extents of counterfeit suspects were to the tune of 3.1 %. However from the laboratory analysis 0.3 % did not meet the Pharmacopoeia Standards in terms of label claim.

9.2 “Operation Jupiter” co-ordinated by the WHO’s Western Pacific Regional Office, the International Criminal Police Organisation (INTERPOL) and the Wellcome Trust-University of Oxford South-east Asian Tropical Medicine Research Programme, in close cooperation with the Chinese authorities, set out to investigate where counterfeit Artesunate (anti malarial drug) was being manufactured and to develop an intelligence document that could be presented to the affected governments. Laboratory analysis focused on 391 samples of genuine and counterfeit Artesunate, collected in Vietnam, Cambodia, Laos and Myanmar, as well as on the Thai/Myanmar border, between 1999 and 2006 by the Wellcome Trust-Oxford SE Asian Tropical Medicine Research Programme. Samples were subjected to high performance liquid chromatography (HPLC), organic mass spectrometry, gas-chromatographic ‘head space’ analysis of the gases surrounding tablets in blister packs, palynology followed by detailed inspection of packaging. What these analyses highlighted in particular was the considerable diversity in counterfeit artesunate emanating from and distributed in SE Asia. For example, a total of 16 different types of fake hologram were identified on packaging, ranging from crude stickers to highly sophisticated copies. In terms of the samples chemical composition, all of the specimens ,thought to be counterfeit (195 out of 391, or 49.9 per cent)

on the basis of their packaging turned out to contain either no or small quantities (up to 12mg per tablet, as opposed to 50mg per genuine tablet) of artesunate. Of the 321 samples, labelled as manufactured by one major and heavily targeted Asian producer, Guilin Pharmaceutical from China’s Guangxi autonomous region, 195 or 61% were found to be counterfeit. The researchers also detected a wide variety of substitute active ingredients in the counterfeit artesunate, including paracetamol, several different erythromycin antibiotics, banned compounds such as metamizole, the carcinogen safrole, and raw material for the production of methylene dioxymethamphetamine (ecstasy).

10.0 Comparison of present study with the study conducted by SEARPharm

Parameter	Study Conducted by SEARPharm	Present Study
No. of samples collected	10,743	24,136
No. of Therapeutic category	12	9
Name of the stratum from where the samples were collected	• Metro Cities (MC) • Big Cities (BC) • District Head Quarters (DHQ)	• Metro Cities (MC) • Big Cities (BC) • District Head Quarters (DHQ) • Towns (T) • Village (Vill)
Number of brands	56	61
No. of samples checked Physically	100 % by the study team	100 % through respective manufacturer (matching of following Parameters) • Foil matching • Text matter matching • Font size of brand • Brand Symbol • Dimensions of the strip • Description of the product from the transparent side of the strip)
Extent of counterfeit suspects on the basis of physical examination.	In the tune of 3.1%	0.046 % (11 samples were not accepted by the manufacturers as their products)
No. of samples tested chemically	2,455 (suspect and genuine samples are mixed) through PVT. Laboratories, which is around 25% of the total sample collected.	2976 samples (from 24,125 unsuspected samples) through Govt. Testing Laboratories which is around 12.336 % of the total samples collected.
Parameter tested for chemical analysis	Identification and Assay	Identification and Assay
Failing in Pharmacopoeia standards in terms of label claim on laboratory analysis (Not of Standard Quality)	0.3 % { Out of 2,455, 08 samples do not conform to claim }.	0.101 % { Out of 2976 unsuspected samples, 03 samples do not conform to claim with respect to Assay (84.8 to 89.3% of the claim)}.

11.0 Observations:

- i) Most of the pharmacy retail outlets in Metro Cities refused to sale the schedule drug without prescription
- ii) Most of the drugs were not available in the retail outlet situated in the village
- iii) Availability of all the selected brands throughout the country are uniform
- iv) To collect Twenty-four Thousand One Hundred thirty-six (24,136) drug samples, much more number of retail outlets were visited due to non availability or refusal to sale the product without prescription (approximately 40,000 retail outlets were visited).
- v) In most of the retail outlets situated in Towns and District HQ, there was a tendency to replace the asked product with the local brands.
- vi) Most of the retail shops did not provide cash memo without demand and in few cases refused to give cash memo even on demand.
- vii) From laboratory reports of all the eleven (11) drug samples which were not accepted as genuine by the respective

manufacturer, it was observed that none of the sample failed in identification tests. However, Eight samples were found substandard with respect to the content of active ingredient as claimed on the label (Assay) and three samples were found conforming to claim with respect to Assay (it is pertinent to mention here that, in case these three samples would have been drawn on a routine basis by the Drugs Inspectors under the Act, these samples might not be declared as spurious by the Government Analyst, since the said samples conforms to the label claim with respect to Identification and Assay).

viii) Out of eleven (11) drug samples which were not accepted as genuine by the respective manufacturer it was observed that five samples collected from Bihar, three from West Bengal, two from UP and one from Gujarat State.

ix) From laboratory test reports of three hundred five (305) samples which were drawn at random (five sample from each brand) from the stocks which were accepted by the respective manufacturer as genuine, it was observed that all the samples conforms to claim with respect to Identification & Assay except the following drugs:

S.No.	Name of the Drug	Sample No.	Identification	Failed in Assay
1.	Atherochek-10 (Atorvastatin Tablet 10 mg)	EZ/OR/Nomapara / Vil/32/537	Positive	86 %
2.	Atherochek-10 (Atorvastatin Tablet 10 mg)	EZ/WB/Kolkata / MC/32/1704	Positive	89.3%
3.	Amlosafe 2.5 (Amlodipine Basilate Tablet BP 2.5 mg)	NZ/Uttaranchal/ Dehradun/BC/25/499	Positive	84.8%

x) Further sampling from the residual stocks (2671 samples) of the collected samples showed 100 % conformity with respect to Identification & Assay by the Government analyst at various Central Government Testing Laboratories.

12.0 Conclusions:-

In view of above observations and data obtained from the manufacturers, after physical verification of all the drug samples and subsequent chemical analysis report on the representative of samples taken at random, it may be concluded that:

(i) The extent of spurious drug in retail pharmacy is much below the projections made by various media, WHO, SEARO, and other studies i.e. only 0.046 % (11 samples out of 24,136 samples).

(ii) Extents of substandard drugs among the branded items are only 0.1 % {Out of two thousand nine hundred seventy six (2976) unsuspected samples, 03 samples do not conform to claim with respect to Assay on chemical analysis}.

13.0 Future Study Design: Future study may be designed covering following aspects:

13.1 Extent of spurious / substandard drugs involved in import & export

Extent of spurious / substandard drugs in channels other than Retails

Extent of spurious / substandard drugs among the brands of relatively smaller manufacturers.

Extent of spurious / substandard drugs among the Generic products.

Extent of spurious / substandard drugs in relatively low sales turnover products.

Other dosage formulations i.e. Injectables, Oral Liquids, Ointments etc. should also be considered in future studies.

13.2 Sampling Plan

Samples should be collected in the pattern of NSQED.

13.3 Selection of Drugs to be collected

Category of drugs for survey shall be fixed by DCGI from time to time.

13.4 No. of Samples to be collected

All the State Drugs Controllers and the Zonal Officers of CDSCO may be directed to initiate necessary steps to collect at least 200 survey samples every month from various stratum.

13.5 Testing of drug samples

Few Approved Drug Testing Laboratories as decided by Drugs Controller General (India) may be designated for the purpose of testing of survey samples.

Samples should be collected at regular intervals through various consumer association/NGOs/ Drugs Samplers as surrogate patient.

14.0 Future Administrative Control

14.1 Necessary funds towards the cost, collection and testing charges of these drug samples should be made available to the Central and States Govt.

14.2 A rapid alert system should be in place so that detection of any spurious drugs in any corner of the country can be informed to all concerned for taking immediate action.

MINISTRY OF LAW AND JUSTICE

(Legislative Department)

New Delhi, the 5th December, 2008/Agrahayana 14, 1930 (Saka)

The following Act of Parliament received the assent of the President on the 5th December, 2008, and is hereby published for general information:—

THE DRUGS AND COSMETICS (AMENDMENT) ACT, 2008

No. 26 OF 2008

[5th December, 2008.]

An Act further to amend the Drugs and Cosmetics Act, 1940.

BE it enacted by Parliament in the Fifty-ninth Year of the Republic of India as follows:—

1. (1) This Act may be called the Drugs and Cosmetics (Amendment) Act, 2008.

Short title
and com-
mencement.

(2) It shall come into force on such date as the Central Government may, by notification in the Official Gazette, appoint:

Provided that different dates may be appointed for different provisions of this Act and any reference in any such provision to the commencement of this Act shall be construed as a reference to the commencement of that provision.

Insertion of
new section
17E.

Adulterated
cosmetics.

2. After section 17D of the Drugs and Cosmetics Act, 1940 (hereinafter referred to as the principal Act), the following section shall be inserted, namely,—

"17E. For the purposes of this Chapter, a cosmetic shall be deemed to be adulterated,—

(a) if it consists in whole or in part, of any filthy, putrid or decomposed substance; or

(b) if it has been prepared, packed or stored under insanitary conditions whereby it may have been contaminated with filth or whereby it may have been rendered injurious to health; or

(c) if its container is composed, in whole or in part, of any poisonous or deleterious substance which may render the contents injurious to health; or

(d) if it bears or contains, for purposes of colouring only, a colour other than one which is prescribed; or

(e) if it contains any harmful or toxic substance which may render it injurious to health; or

(f) if any substance has been mixed therewith so as to reduce its quality or strength."

Amendment
of section 18.

3. In section 18 of the principal Act, in clause (a), for sub-clause (ii), the following sub-clause shall be substituted, namely,—

"(ii) any cosmetic which is not of a standard quality, or is misbranded, adulterated or spurious;"

Amendment
of section
26A.

4. In section 26A of the principal Act, for the word "prohibit", the words "regulate, restrict or prohibit" shall be substituted.

Insertion of
new section
26B.

5. After section 26A of the principal Act, the following section shall be inserted, namely,—

"26B. Without prejudice to any other provision contained in this Chapter, if the Central Government is satisfied that a drug is essential to meet the requirements of an emergency arising due to epidemic or natural calamities and that in the public interest, it is necessary or expedient so to do, then, that Government may, by notification in the Official Gazette, regulate or restrict the manufacture, sale or distribution of such drug."

Power of
Central
Government to
regulate or
restrict,
manufacture,
etc., of drug in
public interest.
Amendment
of section 27.

6. In section 27 of the principal Act,—

(i) in clause (a),—

(A) for the figures, letter and words "17B or which", the figures, letter and words "17B and which" shall be substituted.

(B) for the words "punishable with imprisonment for a term which shall not be less than five years but which may extend to a term of life and with fine which shall not be less than ten thousand rupees;", the words "punishable with imprisonment for a term which shall not be less than ten years but which may extend to imprisonment for life and shall also be liable to fine which shall not be less than ten lakh rupees or three times value of the drugs confiscated, whichever is more:" shall be substituted.

(C) the following provisos shall be inserted, namely:—

"Provided that the fine imposed on and released from, the person convicted under this clause shall be paid, by way of compensation, to the person who had used the adulterated or spurious drugs referred to in this clause:

Provided further that where the use of the adulterated or spurious drugs referred to in this clause has caused the death of a person who used such drugs, the fine imposed on and realised from, the person convicted under this clause, shall be paid to the relative of the person who had died due to the use of the adulterated or spurious drugs referred to in this clause.

Explanation.—For the purposes of the second proviso, the expression "relative" means—

(i) spouse of the deceased person; or

(ii) a minor legitimate son, and unmarried legitimate daughter and a widowed mother; or

(iii) parent of the minor victim; or

(iv) if wholly dependent on the earnings of the deceased person at the time of his death, a son or a daughter who has attained the age of eighteen years; or

(v) any person, if wholly or in part, dependent on the earnings of the deceased person at the time of his death,—

(a) the parent; or

(b) a minor brother or an unmarried sister; or

(c) a widowed daughter-in-law; or

(d) a widowed sister; or

(e) a minor child of a pre-deceased son; or

(f) a minor child of a pre-deceased daughter where no parent of the child is alive; or

(g) the paternal grandparent if no parent of the member is alive;—

(ii) in clause (b),—

(A) for the words "not be less than one year but which may extend to three years and with fine which shall not be less than five thousand rupees", the words "not be less than three years but which may extend to five years and with fine which shall not be less than one lakh rupees or three times the value of the drugs confiscated, whichever is more" shall be substituted;

(B) in the proviso, for the words "less than one year and of fine of less than five thousand rupees", the words "less than three years and of fine of less than one lakh rupees" shall be substituted;

(iii) in clause (c),—

(A) for the words "not be less than three years but which may extend to five years and with fine which shall not be less than five thousand rupees", the words "not less than seven years but which may extend to imprisonment for life and with fine which shall not be three lakh rupees or three times the value of the drugs confiscated, whichever is more" shall be substituted;

(B) in the proviso, for the words "less than three years but not less than one year", the words "less than seven years but not less than three years and of fine of less than one lakh rupees" shall be substituted;

(iv) in clause (d), for the words "and with fine", the words "and with fine which shall not be less than twenty thousand rupees" shall be substituted.

Amendment
of section
27A.

7. In section 27A of the principal Act, for clauses (i) and (ii), the following clauses shall be substituted, namely,—

(i) any cosmetic deemed to be spurious under section 17D or adulterated under section 17E shall be punishable with imprisonment for a term which may extend to three years and with fine which shall not be less than fifty thousand rupees or three times the value of the cosmetics confiscated, whichever is more;

(ii) any cosmetic other than a cosmetic referred to in clause (i) in contravention of any provisions of this Chapter or any rule made thereunder shall be punishable with imprisonment for a term which may extend to one year or with fine which may extend to twenty thousand rupees, or with both."

Amendment
of section 28.

8. In section 28 of the principal Act, for the words "with fine which may extend to one thousand rupees or with both", the words "with fine which shall not be less than twenty thousand rupees or with both" shall be substituted.

Amendment
of section
28A.

9. In section 28A of the principal Act, for the words "with fine which may extend to one thousand rupees or with both", the words "with fine which shall not be less than twenty thousand rupees or with both" shall be substituted.

Amendment
of section 29.

10. In section 29 of the principal Act, for the words "five hundred rupees", the words "five thousand rupees" shall be substituted.

Amendment
of section 30.

11. In section 30 of the principal Act,—

(a) in sub-section (1),—

(i) in clause (a),—

(A) for the words "not be less than two years but which may extend to six years and with fine which shall not be less than ten thousand rupees", the words "not be less than seven years but which may extend to ten years and with fine which shall not be less than two lakh rupees" shall be substituted;

(B) in the proviso, for the words "less than two years and of fine of less than ten thousand rupees", the words "less than seven years and of fine of less than one lakh rupees" shall be substituted;

(ii) in clause (b), for the words "shall not be less than six years but which may extend to ten years and with fine which shall not be less than ten thousand rupees", the words "shall not be less than ten years but which may extend to imprisonment for life and with fine which shall not be less than three lakh rupees" shall be substituted;

(iii) in clause (c), for the words "five thousand rupees", the words "fifty thousand rupees" shall be substituted;

(b) in sub-section (2), for the words "ten years, or with fine, or with both", the words "two years, or with fine which shall not be less than ten thousand rupees or with both" shall be substituted.

Amendment
of section 32.

12. In section 32 of the principal Act, for sub-sections (1) and (2), the following sub-sections shall be substituted, namely:—

"(1) No prosecution under this Chapter shall be instituted except by—

(a) an Inspector; or

(b) any gazetted officer of the Central Government or a State Government authorised in writing in this behalf by the Central Government or a State Government by a general or special order made in this behalf by that Government; or

(c) the person aggrieved; or

shall be punishable with imprisonment for a term which may extend to one year and with fine which shall not be less than twenty thousand rupees or three times the value of the drugs confiscated, whichever is more;"

(ii) in clause (b), for the words "five thousand rupees", occurring at both the places, the words "fifty thousand rupees or three times the value of the drugs confiscated, whichever is more" shall be substituted;

(iii) after clause (b), the following clause shall be inserted, namely:—

"(c) any Ayurvedic, Siddha or Unani drug in contravention of the provisions of any notification issued under section 33EED shall be punishable with imprisonment for a term which may extend to three years and with fine which may extend to fifty thousand rupees or three times the value of the drugs confiscated, whichever is more.";

(b) in sub-section (2), for the words "three months and with fine which shall not be less than five hundred rupees", the words "six months and with fine which shall not be less than ten thousand rupees" shall be substituted.

Amendment of
section 33J.

16. In section 33J of the principal Act,—

(a) in clause (a), for the words "two thousand rupees", the words "fifty thousand rupees or three times the value of the drugs confiscated, whichever is more" shall be substituted;

(b) in clause (b), for the words "five thousand rupees" occurring at both the places, the words "one lakh rupees or three times the value of the drugs confiscated, whichever is more" shall be substituted;

(c) in clause (c), for the words "six months and with fine which shall not be less than one thousand rupees", the words "one year and with fine which shall not be less than twenty thousand rupees or three times the value of the drugs confiscated, whichever is more" shall be substituted.

Insertion of
new sections
33KA and
33KB.

17. After section 33K of the principal Act, the following sections shall be inserted, namely,—

Disclosure of
name of
manufacturer,
etc.

"33KA. Every person, not being the manufacturer of any Ayurvedic, Siddha or Unani drug or his agent for the distribution thereof, shall, if so required, disclose to the Inspector the name, address and other particulars of the person from whom he acquired the Ayurvedic, Siddha or Unani drug.

Maintenance
of records and
furnishing of
information.

33KB. Every person holding a licence under clause (c) of section 33EEC shall keep and maintain such records, registers and other documents as may be prescribed and shall furnish to any officer or authority exercising any power or discharging any function under this Act such information as is required by such officer or authority for carrying out the purposes of this Act."

Amendment
of section
33N.

18. In section 33N of the principal Act, in sub-section (2),—

(i) in clause (gga), the word "and" occurring at the end shall be omitted;

(ii) after clause (gga), the following clause shall be inserted, namely,—

"(ggb) prescribe the records, registers or other documents to be kept and maintained under section 33KB; and"

Amendment
of section
36A.

19. In section 36A of the principal Act, for the words "all offences under this Act", the words, brackets, figures and letters "all offences (except the offences triable by the Special Court under section 36AB or Court of Session) under this Act" shall be substituted.

(d) a recognised consumer association whether such person is a member of that association or not.

(2) Save as otherwise provided in this Act, no court inferior to that of a Court of Session shall try an offence punishable under this Chapter."

13. After section 32A of the principal Act, the following section shall be inserted, namely:—

Insertion of new section 32B.

2 of 1974.

"32B. (1) Notwithstanding anything contained in the Code of Criminal Procedure, 1973, any offence punishable under clause (b) of sub-section (1) of section 13, section 28 and section 28A of this Act (whether committed by a company or any officer thereof), not being an offence punishable with imprisonment only, or with imprisonment and also with fine, may, either before or after the institution of any prosecution, be compounded by the Central Government or by any State Government or any officer authorised in this behalf by the Central Government or a State Government, on payment for credit to that Government of such sum as that Government may, by rules made in this behalf, specify:

Compounding of certain offences.

Provided that such sum shall not, in any case, exceed the maximum amount of the fine which may be imposed under this Act for the offence so compounded:

Provided further that in cases of subsequent offences, the same shall not be compoundable.

(2) When the accused has been committed for trial or when he has been convicted and an appeal is pending, no composition for the offence shall be allowed without the leave of the court to which he is committed or, as the case may be, before which the appeal is to be heard.

(3) Where an offence is compounded under sub-section (1), no proceeding or further proceeding, as the case may be, shall be taken against the offender in respect of the offence so compounded and the offender, if in custody, shall be released forthwith."

14. In section 33 of the principal Act, in sub-section (2),—

Amendment of section 33.

(i) after clause (dd), the following clause shall be inserted, namely,—

"(dda) prescribe under clause (d) of section 17E the colour or colours which a cosmetic may bear or contain for the purposes of colouring;"

(ii) in clause (p), the word "and" occurring at the end shall be omitted;

(iii) in clause (q), the word "and" shall be inserted at the end;

(iv) after clause (q), the following clause shall be inserted, namely,—

"(r) sum which may be specified by the Central Government under section 32B."

15. In section 33-I of the principal Act,—

Amendment of section 33-I.

(a) in sub-section (1),—

(i) for clause (a), the following clause shall be substituted, namely:—

"(a) any Ayurvedic, Siddha or Unani drug—

(i) deemed to be misbranded under section 33E,

(ii) deemed to be adulterated under section 33EE, or

(iii) without a valid licence or in violation of any of the conditions thereof, as required under section 33 EEC,

20. After section 36A of the principal Act, the following sections shall be inserted, namely:—

Insertion of
new sections
36AB, 36AC,
36AD and
36AE.

'36AB. (1) The Central Government, or the State Government, in consultation with the Chief Justice of the High Court, shall, for trial of offences relating to adulterated drugs or spurious drugs and punishable under clauses (a) and (b) of section 13, sub-section (3) of section 22, clauses (a) and (c) of section 27, section 28, section 28A, section 28B and clause (b) of sub-section (1) of section 30 and other offences relating to adulterated drugs or spurious drugs, by notification, designate one or more Courts of Session as a Special Court or Special Courts for such area or areas or for such case or class or group of cases as may be specified in the notification.

Special Courts.

Explanation.—In this sub-section, "High Court" means the High Court of the State in which a Court of Session designated as Special Court was functioning immediately before such designation.

(2) While trying an offence under this Act, a Special Court shall also try an offence, other than an offence referred to in sub-section (1), with which the accused may, under the Code of Criminal Procedure, 1973, be charged at the same trial.

2 of 1974.

36AC. (1) Notwithstanding anything contained in the Code of Criminal Procedure, 1973,—

2 of 1974.

Offences to be
cognizable and
non-bailable in
certain cases.

(a) every offence, relating to adulterated or spurious drug and punishable under clauses (a) and (c) of sub-section (1) of section 13, clause (a) of sub-section (2) of section 13, sub-section (3) of section 22, clauses (a) and (c) of section 27, section 28, section 28A, section 28B and sub-sections (1) and (2) of section 30 and other offences relating to adulterated drugs or spurious drugs, shall be cognizable.

(b) no person accused, of an offence punishable under clauses (a) and (c) of sub-section (1) of section 13, clause (a) of sub-section (2) of section 13, sub-section (3) of section 22, clauses (a) and (c) of section 27, section 28, section 28A, section 28B and sub-sections (1) and (2) of section 30 and other offences relating to adulterated drugs or spurious drugs, shall be released on bail or on his own bond unless—

(i) the Public Prosecutor has been given an opportunity to oppose the application for such release; and

(ii) where the Public Prosecutor opposes the application, the court is satisfied that there are reasonable grounds for believing that he is not guilty of such offence and that he is not likely to commit any offence while on bail:

Provided that a person, who, is under the age of sixteen years, or is a woman or is sick or infirm, may be released on bail, if the Special Court so directs.

(2) The limitation on granting of bail specified in clause (b) of sub-section (1) is in addition to the limitations under the Code of Criminal Procedure, 1973 or any other law for the time being in force on granting of bail.

2 of 1974.

(3) Nothing contained in this section shall be deemed to affect the special powers of the High Court regarding bail under section 439 of the Code of Criminal Procedure, 1973 and the High Court may exercise such powers including the power under clause (b) of sub-section (1) of that section as if the reference to "Magistrate" in that section includes also a reference to a "Special Court" designated under section 36AB.

2 of 1974.

Application of
Code of
Criminal
Procedure,
1973 to
proceedings
before Special
Court.

36AD. (1) Save as otherwise provided in this Act, the provisions of the Code of Criminal Procedure, 1973 (including the provisions as to bails or bonds), shall apply to the proceedings before a Special Court and for the purposes of the said provisions, the Special Court shall be deemed to be a Court of Session and the person conducting the prosecution before the Special Court, shall be deemed to be a Public Prosecutor: 2 of 1974.

Provided that the Central Government or the State Government may also appoint, for any case or class or group of cases, a Special Public Prosecutor.

(2) A person shall not be qualified to be appointed as a Public Prosecutor or a Special Public Prosecutor under this section unless he has been in practice as an advocate for not less than seven years, under the Union or a State, requiring special knowledge of law.

(3) Every person appointed as a Public Prosecutor or a Special Public Prosecutor under this section shall be deemed to be a Public Prosecutor within the meaning of clause (u) of section 2 of the Code of Criminal Procedure, 1973 and the provisions of that Code shall have effect accordingly. 2 of 1974.

Appeal and
revision.

36AE. The High Court may exercise, so far as may be applicable, all the powers conferred by Chapter XXIX or Chapter XXX of the Code of Criminal Procedure, 1973, on a High Court, as if a Special Court within the local limits of the jurisdiction of the High Court were a Court of Session trying cases within the local limits of the jurisdiction of the High Court. 2 of 1974.

ANNEXURE-II

Determination of Sample Size and Samples
for
Estimation of Counterfeit Drugs

ISI, Hyderabad

Introduction

This report is prepared by Indian Statistical Institute, Hyderabad, in response to a request from Drug Controller General (I) seeking advice on determination of sample size and the samples for estimating the percentage of counterfeit drugs in India (see below for details). It should be mentioned here that the scope of this assignment is confined to only to the extent of determining the sample size and the sampling is subject to the limitations of the available data.

Background

Drug Control Authority of India (DCA) has faced with the problem of estimating the percentage of counterfeit drugs. The definition of counterfeit drug is as per the specifications of DCA and it is assumed that given a sample of a drug (tablet, syrup, or other forms), it is possible to identify unambiguously whether the sample is from the original manufacturer or a counterfeit. The problem posed by DCA may be described as follows. Consider a drug such as Crocin. A Crocin tablet (purchased from some place) is either a counterfeit or it is manufactured by the original manufacturer of Crocin. The problem that DCA is faced with is to estimate the extent of counterfeit, either in terms of number or as a percentage expressed against the extent of true Crocin. To fix ideas, let us say during January 07 the number of original Crocin tablets prevailing in the market is N , the number of counterfeit Crocin prevailing in the market is K , then the DCA wants to estimate $100K/N$ or $100K/(K+N)$. The statistical problem posed to ISI (by DCA) is: what is the sample size required to estimate the extent of counterfeit? Furthermore, according to the objectives of DCA, the counterfeit estimates are required separately for each of the following strata: Counterfeit in (i) the Metros, (ii) in the big cities, (iii) district headquarters, (iv) taluk headquarters, and (v) villages.

One more task of the assignment is as follows. DCA proposes to estimate the extent of counterfeit, through a survey, as follows:

- (i) Select n retail outlets at random (n is the sample size),
- (ii) each sampled retail outlet is visited (only once) by a surveyor posing like a patient and ask for the drug,
- (iii) buy the drug if it is available,
- (iv) analyze the drug and decide whether it is a counterfeit or not,
- (v) compile the data and estimate the extent of counterfeit.

The task is to prepare a list of the sample outlets to be approached for collecting the samples.

Analysis

Before taking up the assignment, the problem has been analyzed and the following points were observed and brought to the notice of DCA.

- 1 If the survey is conducted as described above, then it may be difficult to obtain meaningful estimates of the parameter of interest ($100K/N$ or $100K/(K+N)$). The reason is that in the survey, the quantity of drug available in the sampled retail outlet is not being obtained (it is only observed whether the purchased drug is counterfeit or not).
- 2 From practical view point, the parameter ($100K/N$ or $100K/(K+N)$) is not the one that the DCA should be interested in. What is important is the answer to the following question: What is the chance that when a patient asks for a drug, he or she will get a counterfeit (paraphrasing the question, what proportion of the drugs sold are counterfeit drugs?).
- 3 From the type of survey described above it is possible to estimate the proportion of counterfeit among the drugs sold. For this estimation, the sample size can be determined. However, the sample size will turn out to be a function of the proportion of the counterfeit drugs sold and also the proportion of retail outlets that possess the drug. When a patient approaches a retail outlet and asks for a drug there are three possible outcomes: (i) the drug is not available in the retail outlet, (ii) the patient gets a counterfeit, and (iii) the patient gets the original drug (we are assuming that the outcome of a patient getting a combination of counterfeit and the original is ruled out). What has been said just above is that the sample size will depend on the extent of counterfeit and on the extent of outcome (i). Extent of outcome (i) will in turn depend on the quantity of drug available (both counterfeit and the original).
- 4 The probability model for the problem involves cumbersome expressions. A simulation module is built to arrive at the sample size required. As mentioned above, the sample size will be determined using the following three parameters: (i) total number of outlets in the population (N), (ii) number of outlets which sell counterfeit (F), and (iii) number of outlets which do not have the drug (M). Here our interest is to estimate $F/(N-M)$, the counterfeit proportion of drugs sold. While the complaints are that

the counterfeit is about 30%, DCA's experts are of the opinion that it is as low as 0.3%. Therefore, we propose to study the effect of sample size by computing the errors for various sample sizes and various possible values of the counterfeit in the range of 0.3% to 30%, and look for a suitable samples size.

After reviewing and understanding the above analysis, DCA has requested ISI to go ahead with determination of the sample size and list of outlets to be surveyed. The proposed survey is to be conducted, according to DCA, for about 10 popular branded medicines and it has been agreed upon that ISI would determine the sample size and the samples keeping only one brand in mind. In view of the cost involved in sampling, DCA may consider some compromise on determining the samples separately for each brand independently. Therefore, the scope of this assignment, that is determining the sample size and the samples, is restricted to one brand. Some suggestions are hinted for conducting the survey for all the brands that DCA is contemplating. In the next section, the method of determining the sample size and the samples is discussed.

Method of Estimation and Sample Size Determination

Consider any branded medicine. It is of interest to estimate the chance that a person purchasing a medicine at a retail outlet will get a counterfeit of the branded medicine. Let N be the number of total outlets in the population; let p be the proportion of outlets that will respond by selling the drug when asked for; let f be the conditional probability that a purchase at a randomly picked outlet will result in a counterfeit given that the retail outlet will respond positively (positively means that the store will sell the drug, either original or counterfeit). We shall treat N , p and f as the parameters of the model and study the effect of sample size for some selected possible values of (N , p , f).

Let n be the proposed sample size, that is, the number of outlets to be approached in the survey. When an outlet is approached for the branded medicine in question, there are three possible outcomes: (i) the outlet says that the medicine is not available, (ii) the outlet sells a counterfeit medicine, and (iii) the outlet sells original medicine. Let C be the number of outlets, out of the n outlets approached, selling

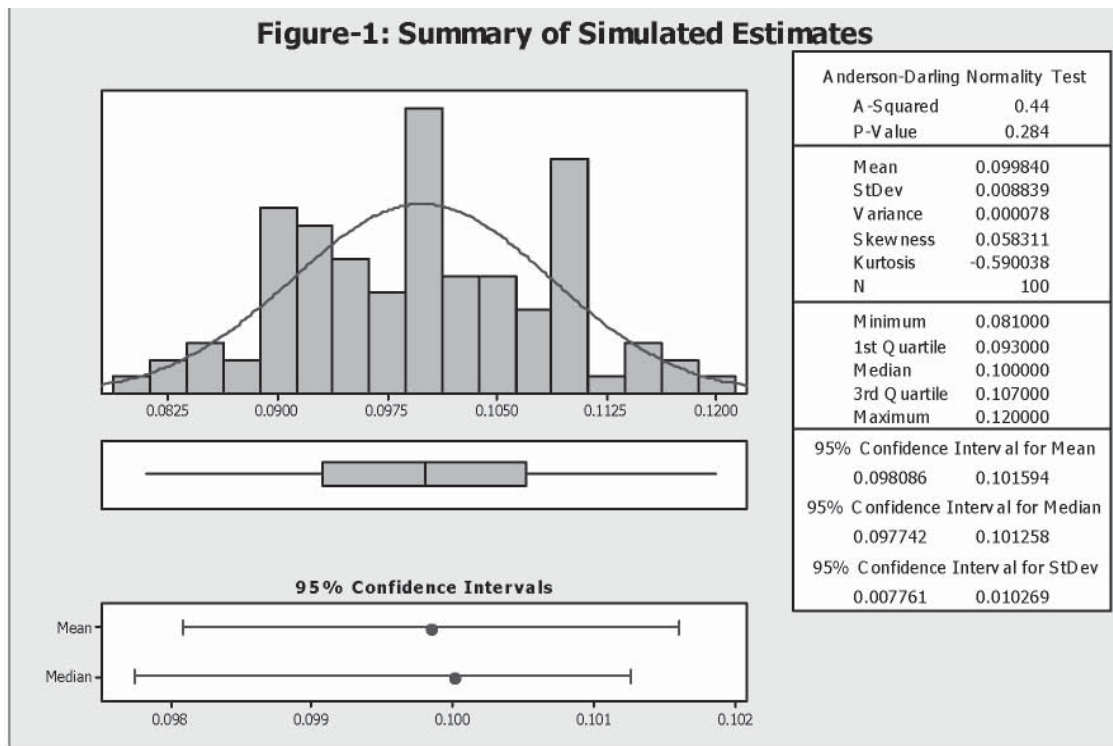

counterfeit drug; and let D be the number of outlets, out of the n outlets approached, selling original drug. The estimate for the chance of a person getting counterfeit drug is taken as $C/(C+D)$ ($=T$, say). Let f be the counterfeit proportion. That is, f is the chance that a purchased medicine is a counterfeit. Note that T is an estimate of f and as the sample size n increases, T becomes more and more reliable. Since the statistical behaviour of T is nontrivial, the simulation tool is used to determine the sample size. The details of the statistical framework and simulation procedure are presented in Annexure-I.

The effect of sample size and its implications can be understood from the following. Suppose there are 400000 outlets (that is $N=400000$) in the population and suppose that 80% of these outlets sell the medicine when approached (that is, $p=0.80$). Further, suppose the counterfeit proportion is 10% (that is, $f=0.1$). Suppose we take a sample of size 1500 (that is, $n = 1500$). Using the simulation model, it is possible to simulate outcomes of this exercise. One such outcome, from the simulation model, has resulted in the following outcome: 293

outlets said the medicine was not available, 122 outlets sold counterfeit drug and 1085 outlets sold original drug. This results in an estimate of 0.101 (note that $C=122$, $D=1085$ and $T = 0.101$). It must be noted that the estimate depends on which 1500 outlets are covered under the sample. Another outcome of the simulation resulted in the following: $C=106$, $D=1103$ and $T=0.088$. A repetition of this simulation exercise 100 times results in 100 estimates. For comprehension, a set of 100 such estimates generated through simulation exercise are presented in Table-1 below. These data are also summarized in the form of a histogram (see Figure-1). It may be noted that, in this case, the estimates range from 0.080 to 0.120 with an average of 0.099. The range [0.080, 0.120] is called a confidence interval for the estimate of the counterfeit chance, and the average behaviour of the estimator is satisfactory (because the average value, 0.099, is close to the true value $f = 0.100$). In this case, it may be noted that the error in estimating f is about ± 0.02 . By increasing the sample size it is possible to reduce this error.

Table-1: Simulated Estimates

0.106	0.099	0.093	0.110	0.111	0.107	0.084	0.101	0.101	0.104

To understand the behaviour of the estimator T , under a different scenario, let us examine the simulation results for $N=300000$, $p = 0.70$ and $f = 0.003$. The simulation for this situation with $n = 1500$ has resulted in a range (confidence interval) of $[0.000, 0.007]$ for f and with an average of 0.003 . Another simulation exercise with $n = 2000$ for the same situation resulted in a range of $[0.001, 0.006]$ with an average

of 0.003 . Simulation results for some selected values of the parameters (N , p and f) with different sample sizes are presented in Table-2. DCA authorities felt that the medicines for which the survey will be conducted are so popular that the chance of non-availability of the medicine will be less than 0.2 . In view of this, we have taken $N=400000$ and $p=0.8$.

Table-2: Effect of Sample Size on Estimation

F	Size	Min	Average	StdDev	Max	Std. Error	Cv

An extract of Table-2 is presented in Table-3. Table-2 and Table-3 can be used as a guide in determining the sample size.

Table-3: Coefficients of variation (Cv) of the Estimates

	0.001	0.003	0.01	0.1	0.2	0.3
500	168	168	51	14	9	8
1000	111	111	36	11	6	5
1500	97	97	30	8	5	5
2000	83	83	25	7	5	3
2500	74	74	22	7	4	3

Note: The coefficient of variation is computed as follows. Consider the figure 14 in the body of the table against 500 and 0.1. The Cv =14 is equal to $100s/m$ where m and s are the mean and standard deviation of the 100 estimates simulated with parameters N=400000, p=0.8, f=0.1 and sample size equal to 500.

Sampling of Outlets

While determining the sample size, it was implicitly assumed that the sampling will be done using simple random sampling of outlets without replacement. The basic reason for this is that no auxiliary information (such as areas known for counterfeit drugs or areas where living conditions are poor or good, etc) was available to work on reduction of sample size. Even drawing simple random sampling was not a feasible proposition as the only information available was on the number of outlets and not the list of outlets with addresses (see Annexure-II for the data made available on the retail outlets). Furthermore, the numbers were only approximate estimates.

In view of the difficulties with respect to sampling using outlet identities it was decided to adopt the Indian census for the purpose sampling. Consider the case of estimating the counterfeit in the Metros. There are eight metros and about 40000 retail outlets in these metros. Since there was no list of outlets, the wards in the metros were taken as the primary sampling units. From the census (India Census 2001), the list of wards of the metros was available. If the required sample size is 1600 (that is the number of outlets to be approached), then a sample of wards of size 1600 from the list of wards of the metros is drawn (with replacement) and then an outlet in that ward is picked (at random by the surveyor at the time of actual survey). Suppose in this sample a ward is selected 5 times, then collect five samples from that ward (preferably from five different outlets of that ward if possible). Attempts were made to adopt similar strategy for other strata, that is, for big cities, district headquarters, taluk headquarters and villages. But due to non-availability of proper information from the census, some compromises were inevitable. Some of the difficulties encountered in dealing with the census data for this purpose are briefly outlined in the next paragraph below.

Given the time constraints and non-availability of required

data, we had to adapt census data. For this purpose, we procured the India Census 2001 data [1]. These data were available in 12 CDs with different states' data in different CDs. One of the strata under our consideration is big cities. However, the definition of "big city" is not explicitly defined (either by DCA or in the census). In the census, there is a category called "one million plus city," which meant a city with a population of above one million. Therefore, we have taken the big cities as one million plus cities. Next, consider the stratum of villages. The DCA had in mind only those villages which have medical retail outlets. But such a list of villages is not available. One of the conditions for entitlement of village, according to the census, is that the population size should be less than 5000. But villages with populations are unlikely to have outlets. For this purpose we decided to consider only those villages with population between 2000 and 5000. Even then our problem was not resolved because there were more than 6,00,000 villages and the list of these villages along with population was not available. Therefore, we have drawn and listed a sample of 50000 villages so that if the required sample size is 1500, then investigate the first 1500 feasible units in the listing.

The case of selecting samples from taluk headquarters was another issue. There was no uniformity in the concept of taluk headquarters among all states. Taluk headquarters exist in some states but not in all the states. Only thing that was useful in this case was the concept of subdistrict (a sub-district is somewhat equivalent to a taluk headquarters). A list of all available sub-districts (in the census) was prepared and a sample was drawn from that list. Preparing the list of sub-districts was a very laborious task as this has to be extracted from each of the 600 and odd districts almost manually.

Plan of Sampling

With all difficulties explained above, the lists of places to be surveyed are prepared. These lists are provided in Annexure-III (as the lists are too large in size, these are given in the

soft form on a CD) for each of the five strata, namely, metros, big cities, district headquarters, taluk headquarters and villages. Tables 2 and 3 can be used for choosing the sample size. Looking at Table-3, a sample of size 1500 per stratum should be adequate. The standard error in this case does not exceed 0.03 (see the Std. Error of rows with sample size 1500 in of Table-2). As per DCA, a standard error of 1 is acceptable. Therefore, a sample of size 1500 may be adequate for the purpose. It must be noted that the sample size specified here is for a particular brand and particular stratum. Hence, if there are 10 brands, then the total sample size for all brands and all strata will be about 75000. The actual plan for execution is outlined in the next paragraph.

Annexure-III presents list of all units for each stratum from samples are drawn. The term unit here refers to ward/district headquarters/taluk headquarters/villages.

The actual units (retail outlets) must be picked up from the sampled units at the time of survey. The list of sampled units will include more than the required size (1500). There are two reasons for this: (i) If for some reasons it is decided to go for a different sample size, say 1600, then the same list can be used for the survey, and (ii) if for some reasons It is not possible to survey a unit in the list of sampled units, then one can choose the next in the list. Therefore, the sampling should be executed as follows. First decide on the sample size, say for the argument sake 1500 (the recommended sample size). Take sample as the first 1500 feasible units. It must be remembered that if an outlet results in saying “the medicine not available” as a part of the sample.

Concluding Remarks and Recommendations

In this report we have tried to address only the effect of sample size in estimating the chance of a person getting counterfeit drug purchased from a retail outlet. The study is useful in estimating the approximate sample size for a given requirement of precision of the estimate. Due to non-availability of

pertinent data, a number of compromises had to be made in selection procedure of the samples. Nevertheless, due to adequately large sample sizes, the estimates are expected to be fairly good.

The selection of locations for drawing samples has been worked out for a single drug. Ideally, the selection (random selection of samples) should be done independently for each drug separately. However, this might escalate the cost and effort phenomenally. Therefore, it may be imperative to restrict the freedom of selecting independent samples. Under these circumstances, efforts should be made to select the outlets randomly from a given location for different drugs.

Finally, it is extremely important to plan the activities of the actual field survey. This involves decision on various aspects such as qualification of surveyors who will collect the field data, the procedure of collecting samples, the data collection formats, planning of sequence of visits to the selected locations, etc. These activities are outside the scope of this assignment. Taking help from sampling experts and previous surveys [2] for similar objectives will be useful in planning these activities.

Last but not the least, it is utmost important to keep a good control on the non-sampling errors as the sample size is very large (about 75000). Some of the non-sampling errors include picking up samples from convenient places, loosing traceability of the samples, measurement errors, wrong classifications (a counterfeit as original or vice versa), etc.
